## Company profile

FIDIA S.p.A., established in Turin since 1974, designs, manufactures and sells Numerical Controls and Milling Systems for the production of complex shapes mainly for the automotive, aerospace and energy sectors.

With three industrial sites in Italy, one Joint Venture in China and seven Subsidiaries overseas, the FIDIA Group employs approx. 341 people and reached 58,8 MEuro of turnover in 2016.

The Company is focused on high-quality products and customizable machines being, since its creation, among the world leaders in the field of Numerical Controls for machining of complex surfaces as well as in the one for High-Speed Five Axis Milling Centers. In the last years due to their outstanding performances, the new gantry type machines "GTF" have encountered a considerable success in the global market both in the mould & die and aerospace industries.

A significant percentage of the Group's annual turnover is invested every year in research and development. Certified ISO9001 since 1996, FIDIA S.p.A. is constantly focused on improving the performances, quality and reliability of its products.

Technological excellence, constant innovation, highly skilled human resources and international business presence are the key factors of the FIDIA success over more than 40 years of activity.

## GTFM v3

The most compact version in GTF family relies on a monolithic structure of steel and cast iron. Perfect size for plastic injection moulds and prototyping. The GTF Line fulfills the most demanding requirements of main industrial applications.

## Fidia Group: main consolidated financial data as at 31.12.2016

Euro/thousands	31/12/2016	%	31/12/2015	%
Net revenues	58.850	98,7%	60.324	95,3%
Value of production	59.617	100,0%	63.332	100,0%
Gross operating margin (EBITDA)	4.264	7,2%	5.690	9,0%
Operating margin (EBIT)	3.436	5,8%	4.146	6,5%
Earning before tax (EBT)	3.218	5,4%	3.510	5,5%
Net consolidated profit/(loss)	2.443	4,1%	2.377	3,7%
- Bank deposits and cash	(8.925)		(16.041)	
- Long and short term loan	16.337		9.507	
Net financial position (credit)/debt (H)	7.412		(6.465)	
Net equity	18.938		19.027	

The electronic sector (CNC) revenues are 4.625 thousand euros, with an increase of 3,3%, compared with 2015.

The mechanical sector (HSM) revenues are 41.483 thousand euros, with a decrease of 1,8% compared to 2015; the after sale service business (Service) has recorded revenues for 12.742 thousand euros.

Considering the new orders acquired in the first months of the year, most of 2017 production capacity of the High Speed Milling system division business unit is nearly saturated.

## Velocity 5™

High speed and accuracy of complex surfaces machining are the most known and appreciated features of Fidia CNC Numerical Controls.

Years of rigorous and close collaboration with top End Users and Machine Tools Builder has allowed Fidia to be on the leading edge in CNC's technology of complex surface milling.

Velocity 5™ is a further significant step in speed and quality improvement.

It is available on the full current range of Fidia numerical controls and can be installed as retrofitting on many of those already operating.

## Research and Development

The R&D activities, carried out mainly by the parent company Fidia S.p.A., have always been one of the strengths of the Group and received substantial investments over the years. A team of approx. 33 people supported by specialized consultants is currently dedicated to R&D activities.

The R&D activities are carried out mainly by in-house resources and a substantial part of the expenses incurred consisted of costs for personnel (about 1,7 million in the FY 2016). All costs incurred are posted directly to the income statement.

R&D allows the Group to pursue the goal of constantly adapting its products to customer needs and to be always at the forefront thanks to technological innovation in its commodity sector.

Research covers both lines of business of the Group.

The costs incurred by the Group in 2016 amounted to approx. 2,1 million (about 3,5% of revenues).

In cooperation with Italian and European Research Centres and several leading Industrial companies, the Group is engaged in:

- 4 projects co-financed by the European Commission (FP7 and H2020 Programs)

## ViMill®

ViMill® real-time 3D virtual collision look-ahead software effectively help the machine operator in avoiding unforeseen and always very costly collisions.

While milling is in progress, ViMill® is monitoring any unexpected collision situation by graphically executing the actual milling process comfortably ahead in the part program future blocks.

Additionally, ViMill® 3D anti-collision graphic simulation software is also active in JOG Mode, allowing a highly safe operation of manual axis displacements. Such feature is of great support to the operator especially in case of low reciprocal visibility of the tool, workpiece or milling head.

Despite the safety provided by off-line part-program simulation software products, actual machining conditions may vary due to the need of modifying a range of machining set-up, like a different positioning of the workpiece, the off settings of tools or "return to job" and stop and go operations.

ViMill® acts like a safety guard of the machine: a 3D virtual reality "avatar" focused on observing and safely controlling the resulting situations of the given milling toolpath in the near future.

## C40 Vision

The C40 Vision numerical control is an innovative solution for machining in a modern and efficient way. By integrating the software ViMill® offers performance and features of highest level and extraordinarily effective for the control and the safety of machine tools.

## KR199

The platform integrates a pallet system shared by two or more machines. A powerful dedicated software, automatically manages and optimizes the flow of production without intervention of the machine operator. Each machine can be also used in a standalone way, nonetheless granting the normal functioning of the FMS system with the other machines.

## GTF line

The new GTF Gantry machine Line, identified by a wide operative volume modularity, combines High Speed performances with great structural stiffness.

## Heads

Fidia proprietary heads dedicated to a wide application range, from the heavy chip removal to the 5-axis super-finishing.

## Numerical Controls

The FIDIA numerical control line can be installed on a wide range of machine tools: from traditional milling and boring machines to machining centres, including the most complex high speed milling systems.

## HMS

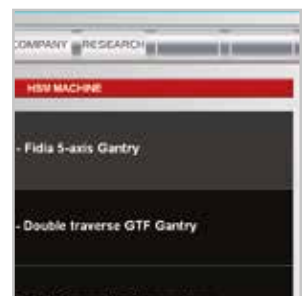

The HMS system is a device designed to check and correct geometric errors of continuous and indexed bi-rotary heads as well as roto-tilting tables.
